

Handling Cart for Downhole Subs

APS Technology has developed versatile carts for handling and maintaining downhole subs. The carts allow subs to be moved, instrumented and repaired efficiently. The extremely rugged, welded steel construction allows them to support the heaviest tools. An 8 in. (203 mm) deep cutout on one side allows a technician to have easy access to the sub while seated. The working surface is solid table mat, which is heat, oil and solvent resistant, and static dissipative.
